

Light Bar Mount Installation Instructions

1. Remove license plate and the plastic frame work from the bumper
2. Remove the two plastic caps from the bumper. Under the caps you will find the threaded inserts that will hold the light bar mount.
3. Take the two aluminum spacers and insert them into the round holes of the bumper with the small step of aluminum spacers going in first.
4. Take the light bar mount and install the two Allen bolts through the large flat plate at the back of the light bar mount passing through the aluminum spacers and thread into the bumper. Torque to 17 foot pounds.
5. Reinstall license plate and plastic frame if desired.
6. 20" light can now be installed onto light bar. Follow manufacture's wiring instructions.
